

Hi AppTailors team,

I'd like to apply for the Python Developer (AI) position.

I build Django web backends and ship Generative AI features to production — from API design and async worker flows through deployment — not just model calls in isolation.

Match (details on CV): 6+ years Python · Django, DRF, REST API · production LLM APIs, embeddings, STT pipelines · feature ownership implementation → deployment (Docker, GCP/AWS) · remote, worldwide · B2 English.

Happy to walk through one Django + AI feature end-to-end on a short call.

Best regards,
Maksim Vasilenka
Minsk, Belarus
