

Hi team,

I'd like to apply for the Middle/Senior Python Developer position.

I build high-performance backends on FastAPI and Django for international products — US health insurance, EU insurtech, AI SaaS, and high-volume marketplaces. Day to day: asyncio-friendly services, PostgreSQL/Redis under real load, Docker and CI/CD on AWS/GCP, code reviews with a distributed team. I like fast-paced product work where engineering quality actually shows up in production.

Match (on CV): 6+ years Python · FastAPI, Django/DRF · asyncio & async workers · PostgreSQL & Redis · REST/OpenAPI · microservices · Docker, K8s, CI/CD · AWS/GCP · AI integrations (LLM, STT) · event-driven flows (Pub/Sub, Celery) · remote, global · B2 English.

Happy to walk through one backend feature end-to-end — API design, async processing, and deployment — on a short call.

Best regards,

Maksim Vasilenka
